Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 26-35 are drawn to an alignment target, classified in class 257, subclass

797.

II. Claims 1-25 are drawn to Method for using an alignment target, classified in class

438, subclass 401.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as product and process of use. The inventions can be

shown to be distinct if either or both of the following can be shown: (1) the process for using the

product as claimed can be practiced with another materially different product or (2) the product

as claimed can be used in a materially different process of using that product. See MPEP

§ 806.05(h). In the instant case the process for using an alignment target could be used on

substrates other than wafer substrate.

Because these inventions are distinct for the reasons given above and have acquired a

separate status in the art as shown by their different classification, restriction for examination

purposes as indicated is proper.
